CONTROL

## Multi-purpose split heat pumps, suspended and tower versions

### FEATURES

- Inverter air-water heat pump
- Energy efficiency class in average climate heating up to: A+++ (35°C) and A++ (55°C)
- Powers available: 4 Powers with refrigerant R32 (4-6-8-10 kW single-phase) and 3 Powers with refrigerant R410A (12-14-16 kW single-phase and three-phase).
- Production of DHW (Domestic Hot Water) at high temperature, up to 75°C.
- DHW management: a water/water heat pump unit integrated in the internal unit supplies domestic hot water at high temperature regardless of the external climatic conditions.
- Absolute continuity availability of DHW: guaranteed by the redundancy of the dual cooling cycle system
- Anti-legionella cycles that can be avoided using the high temperature refrigeration cycle.
- Double stage electric heating elements as standard: activation of single or double heating element to support the heat pump by means of a simple electronic control configuration. Each stage is activated according to the actual

### DHW AND COMFORT AT THE SAME TIME

The two interconnected refrigerator cycles allow the decoupling of the heating/cooling from the DHW production, enabling them to operate in parallel, avoiding thus interruptions in the domestic comfort supply.

### DOMESTIC HOT WATER UP TO 75°C

The storage of DHW at high temperature makes it possible to reduce the volume of the storage tank by up to 30%, and to avoid energy-intensive consumption of the anti-Legionnaire's disease cycles, since they are normally carried out by the use of electric heating elements.

### LOW GWP GAS

In sizes up to 10 kW, it uses the R32 refrigerant, characterised by greater efficiency and a greenhouse effect reduced by almost 70% (compared to R410A).

need for thermal power, in order to optimise electricity consumption (supplied disabled by default).

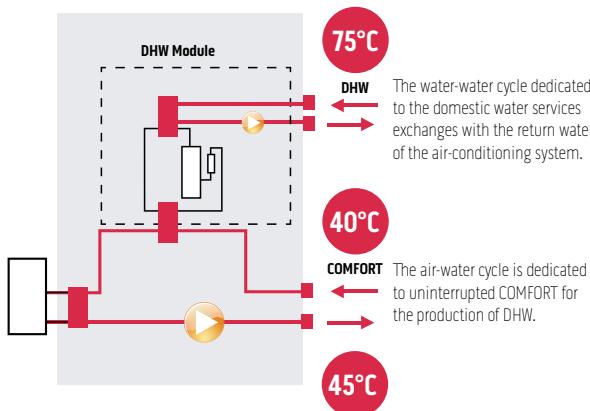

- Configurable set points: two set points in cooling. Three set points in heating (one of which for DHW): the set points can also be selected via remote contact.
- Holiday and weekly programmer: heating/cooling, DHW, night-time.
- Climatic curves with external air temperature probe: two curves available, one for cooling and one for heating. The climatic curves are used to vary the temperature of the water supplying the system according to the external climatic conditions, adjusting the thermal needs of the building, in order to achieve energy savings.
- Refrigerant gases: R32\* or R410A\* for the reversible circuit dedicated to air conditioning and R134a\*\* for the high temperature circuit dedicated to the production of DHW.
- Built-in 150 L high efficiency storage tank (tower version) with an exchange battery surface equal to 1.5 m<sup>2</sup>.

### AQUADUE TECHNOLOGY

#### HEATING MODE

+DHW at high temperature

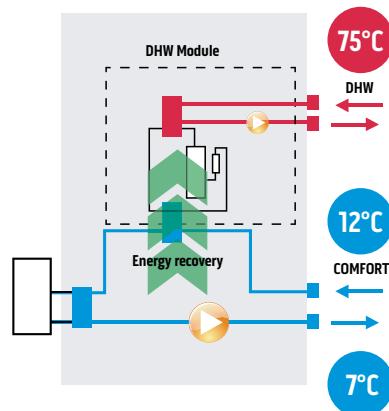

Production of DHW guaranteed regardless of the outside temperature for optimal operation all year round, not guaranteed by traditional heat pumps.

#### COOLING MODE

+DHW at a high temperature with energy recovery

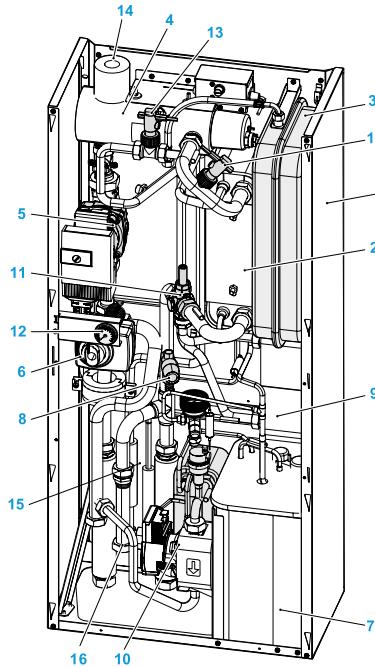

The energy normally dissipated outside is recovered and used to produce DHW up to 75°C.

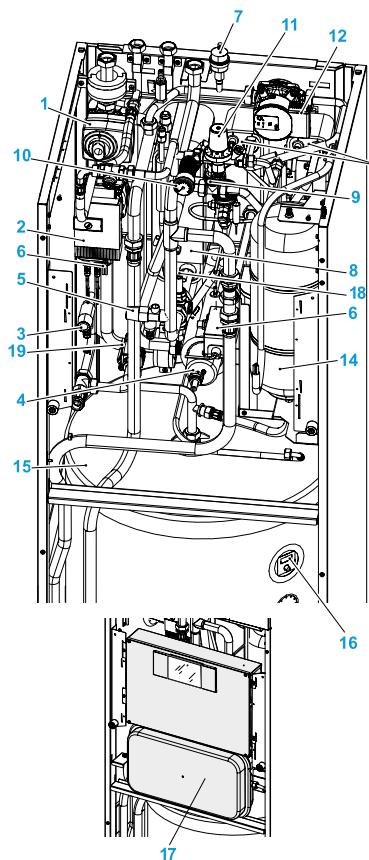

\* Equipment not hermetically sealed containing fluorinated gases with an equivalent GWP of 675 (R32) and 2088 (R410A)

\*\* Non-hermetically sealed equipment containing fluorinated gas with GWP equivalent 1430

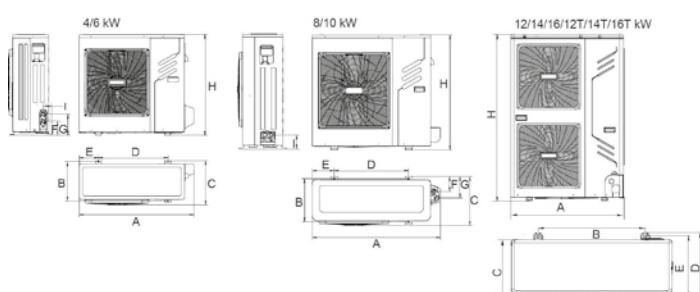

## LAYOUT, DIMENSIONS, WEIGHT

1. Support structure
2. System primary circuit heat exchanger
3. System circuit expansion vessel
4. Electric heating elements manifold
5. Primary circuit electronic circulation pump
6. 3-way valve
7. DHW circuit compressor
8. DHW circuit expansion valve
9. DHW circuit heat exchanger
10. DHW circuit electronic circulation pump
11. Flow regulator
12. Pressure gauge
13. Flow switch
14. Automatic safety vent
15. Refrigeration connections
16. Hydraulic connections (system and external storage tank)

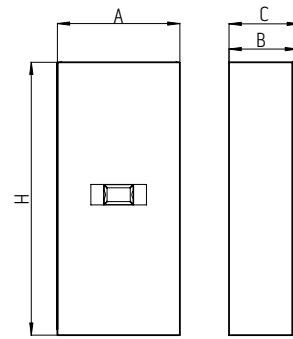

1. 3-way valve
2. Air conditioner circuit circulation pump
3. Safety valves (DHW circuit 6 bar)
4. Post-heating electric heating element manifold
5. Safety valves air conditioner circuit 3 bar
6. Electric heating elements safety thermostats
7. Automatic air vent valves
8. Air conditioner circuit heat exchanger
9. Flow switches
10. Air conditioning circuit pressure gauge
11. DHW circuit filling unit
12. DHW circuit circulation pump
13. DHW circuit heat exchangers
14. DHW circuit expansion tank
15. DHW tank
16. Anode tester
17. Air conditioner circuit expansion tank
18. Regulator of evaporator water flow rate
19. DHW thermostatic accumulators

## COOLING + DHW WITH ENERGY RECOVERY

During summer operation in cooling mode, the cycle dedicated to DHW production extracts heat from return water from the system circuit.

The cooling requirements of the building is partially satisfied by the DHW cycle and the comfort refrigerating cycle must deliver less power by reducing the speed of the inverter compressor.

The heat taken from the system is recovered in hot water for domestic use. The efficiency of the integrated system increases (ratio between the energy produced and the energy absorbed from the mains).

## PERFORMANCE AND ENERGY ADVANTAGES

In adverse weather conditions traditional heat pumps decrease thermal output producing water at a lower temperature. Sherpa AQUADUE® as well as extending the area of operation ensures a constant heat output, in the production of Domestic Hot Water. The double refrigerator circuit allows higher DHW production temperatures thanks to the water-water circuit which are independent of outside air temperature. In summer cooling operation the refrigeration cycle dedicated to DHW production removes heat from the comfort circuit increasing the overall efficiency of the system.

Accessory description on page 50

Please note that optional accessories are available for purchase with all models of the heat pump. When compatibility is only possible with certain sizes, the information is shown in the table. Standard accessories are already included in the heat pump code.
